ULMA forklifts host of the M24 meeting of the European project T-REX

15/10/2015

The consortium of the European project T-REX has met at the headquarters of **Ulma forklifts** in Oñati to assess its progress and achieve goals both at the individual level as of inter-cooperation of the component parts. The Tekniker Foundation coordinates the partners of the project constituted by European members of the business sector, technological centres and universities. Cie Automotive, Eenergia Vortex and Ulma participate from Spain.

New business models that this project aims to promote are oriented to the service in an approach to extending the life of products applying predictive techniques, for redesign and reuse, supporting the decisions in online systems of monitoring of technical state of the critical elements of the selected product.

The Conference took as the main focus of work progress in methodology of business models; Re-engineering of services and implementation of maintenance based on CBM in the three industrial partners involved in the project: internal transport of material, machine - tool and robotics. As host and participant in the project, Ulma presented the first achievements of the project, which is developing a new business model and an own fleet manager seeking to bring specific and relevant information for the improvement of its technical assistance service.

The T-REX project, which will conclude at the end of 2016, will again bring together his Consortium in Italy during the month of March with the aim of presenting the fully completed applications and new and innovative business models designed over the course of this project.

ULMA forklifts provides ideas and innovative solutions for the improvement of the internal management and decision making of their customers. We are in constant evolution, analyzing every novelty and calculating in detail their impact on the business of our customers.

This compact car contributes to production "lean" and is ideal for small spaces. It is also available with platform, with a load capacity of 400 kg

Linde Material Handling extends the range of tow tractors with a version with capacity of two tons

Drafting Interempresas 16/10/2015

The methodology "lean" is becoming the work pattern in more and more industrial sectors. Small and medium-sized enterprises following the example of the leading manufacturers of automobiles and machinery, are also taking their logistics strategies, including manufacturing practice "lean". Linde Material Handling is now offering the Linde P20 compact pull tractor to guarantee a supply of efficient production. The new tractor has a two-ton towing capacity and extends the existing range of tractors Linde, which previously covered a range of three to 25-ton load. Among other things, it is ideal for small spaces.

Tractor compact drag Linde P20 and Linde W04 platform is ideal for the production "lean". Other fields of application are the airports, hospitals and markets, for example.

The electric tow tractors have gained ground in the last 10 years. During this period, the market has recorded an average annual growth of 7% approximately. At the same time, have emerged, new fields of application. The new tractor takes into account these changes and has been designed as a specific solution to carry loads of up to two tons. This means that it can be used as a towed vehicle to transport up to five small containers of cargo (KLT). These towed vehicles are used in the automotive industry and in many other production environments. Optionally, the tractor is also available with platform with a capacity of 400 kg, with the name Linde W04.

Efficient and agile

With a width of 600 mm, Linde new tractor is extremely compact and, therefore, offers a particularly small turning radius. This means that its use is very flexible and can maneuver safely even in very narrow spaces. At the same time, the operator always remains within the contour of the vehicle in any driving situation. Stabilizing wheels provide greater stability in curves. To adapt the tractor to some applications, the distance to the ground may increase 40 to 80 mm, which means that it can also be used abroad. The traction motor 1.5 kW without maintenance and simple battery replacement guarantee maximum efficiency at work. The replacement of the battery can be both laterally and vertically.

Comfort and driving safety

The rudder and the backing of the Linde P20 tractor can be adjusted to the operator. The ergonomic shape of the handle protects hands and helps to ensure your security within the chassis during all the time of driving. The backrest provides lateral support, which makes driving in curves and reduces physical stress. As part of the basic equipment is also a foldable and adjustable seat height, which provides greater comfort of driving in the longer routes. Low access, only 119 mm height, ensures that the driver can enter and comfortably out of the car.

Versatile special equipment

There are several optional equipment safety and comfort to meet the requirements of a wide range of different applications. For example, a protective device of the knees on the inside of the tractor that protects the operator in the event of sudden braking. There are also various types of trailers available docking so that the tractor can drag different types of containers of cargo. LED lamps in the front and rear part of the tractor part of the standard lighting system, and can be complemented with working headlight, if required by the customer.

Production "lean" and other applications.

Thanks to its compact design and ability to drag up to two tonnes, the Linde P20 tractor can be used for much more than to meet the logistical requirements of a production "lean". There are many more fields of application, such as the handling of carts of luggage at airports, in hospitals or in markets, for example.

New security solutions in the Axis Solution Conference event

15/10/2015

Axis Communications invites installers, system integrators, consultants, customers and all those who don't want to miss the opportunity to see how Axis and its partners can provide solutions to your vigilance and your activity. This format allows users and installers can learn about a world of solutions for each of the vertical markets: retail, banking, traffic, logistics, industry, critical infrastructure, integration platforms and Cloud platforms, along with partners who will implement fully live solutions for each segment. There will also be lectures by experts in the industry of security and end-customers.

You will learn first-hand the latest developments and opportunities in all areas of network video including analytical video, business intelligence and associated technologies like facial recognition, traceability of logistic platforms, management systems access, monitoring and remote management of industrial processes, perimeter security, solutions for mobility and many more through live demonstrations. The event takes place on October 29 at the hipodromo de la Zarzuela in Madrid, from 9 am to 6 pm. You can register by clicking [here](#).
